DC–DC POD: 5 V –> ISOLATED +/–15 V (A0515S–1WR3), LC FILTER, CAPACITANCE MULTIPLIERS

J1 plugs into the StimHAT's J103 (pin 1 = 5 V), J2 into J102's holes (the JST socket is not fitted then): J2.4 = +V, J2.3 = 0V, J2.2 = –V, J2.1 = CAB = 0V (the HAT's cable–detect return). Both are right–angle headers on the pod's bottom edge; the pod stands on the HAT with its parts facing north. A0515S: 1 W, min. load 10 %; L / C and the Q101 / Q102 multipliers (about 0.6 V drop per rail, 60 dB ripple rejection above 100 Hz) came off the StimHAT, which keeps C109 / C110 and the 20 V clamps.
